

Gregory Mitchell

613-207-3865 | grmitch1@gmail.com | linkedin.com/in/gregmitch | github.com/GregMitch

SKILLS

Technical Skills: C++, C, Rust, Python, Dart, SQLite, Amazon EC2, AWS Lambda

Frameworks & Tools: Git, FLTK, Flutter, Docker, Jenkins, WinDbg, Jira

EXPERIENCE

Intermediate Software Developer

Feb 2026 – Present

Fortinet

Ottawa, ON

- Built VoIP firmware in C++ using FLTK's event-driven architecture for new GUI components.
- Optimized Android GUI navigation and performance using Dart and Flutter DevTools.
- Supported legacy firmware releases and investigated critical customer defects to improve device stability.

Senior Software Developer

Mar 2025 – Feb 2026

Trend Micro

Ottawa, ON

- Coordinated a cross-team effort to merge divergent implementations of the Application Control feature.
- Extended wildcard engine in C to support glob (*) patterns for the Log Inspection module.
- Researched and verified a method of creating Rust libraries for old versions of RHEL6 using the Zig compiler.
- Resolved a critical case of high I/O utilization by tracking metrics in memory instead of writing to the database.

Software Developer

Jan 2023 – Mar 2025

Trend Micro

Ottawa, ON

- Developed a Windows registry scan in C++ for the Integrity Monitoring module, moving away from the monolith.
- Enhanced Jenkins infrastructure to increase the upgrade version limit by 100% and enable hotfix support.
- Initiated porting C++ features to Rust and presented training material accessible to 7000+ employees globally.
- Implemented database migration so users can seamlessly upgrade from the legacy version to the latest.

Software Developer CO-OP

May. 2022 – Aug 2022

Trend Micro

Ottawa, ON

- Implemented rule metrics in the Application Control feature, resulting in faster diagnosis for customer issues.
- Patched a PowerShell vulnerability by parsing scripts and ensuring only pre-authorized scripts are executed.
- Optimized & enhanced wildcard matching algorithm with dynamic programming to include globstar support.

Software Tester CO-OP

May 2021 – Aug 2021

Nokia

Ottawa, ON

- Created automated test suites in JavaScript with Selenium & Mocha to verify web application functionality.
- Updated legacy automation test suites to maintain a success rate of greater than 95%.
- Utilized XML scripts to modify user permissions and network nodes, decreasing configuration time by 50%.

SIDE PROJECTS

IDEK: The Game | C++, C, SDL3, Git

2026

- Created 2D action game with SDL3 using procedural programming in C.
- Ported the code to C++17 to leverage OOP paradigms as the game expanded in scope.
- Optimized memory & performance with shared textures and "swap-and-pop" entity lifecycles.

Imghost | Python, Flask, sqlite3, Amazon S3, Git

uOttaHack2021

- Developed a website to host, share, and tag user-uploaded images with my team at uOttaHack2021.
- Implemented backend routing using Python Flask to handle HTTP requests, returning formatted JSONs.
- Generated readable random phrases with Python for use as image IDs that pointed to internal image links.

EDUCATION

University of Ottawa

Ottawa, ON

Bachelor of Applied Science in Software Engineering: 3.7 GPA

Sept. 2018 – Jan 2023

- Admissions Scholarship: \$3000
- Data Structures & Algorithms, Software Architecture, Quality Assurance, Software Requirements, Databases, Computer Architecture, Computer Networks, Object Oriented Programming
